## PredictSURE IBD™ is the first validated whole blood prognostic test for Crohn's disease and ulcerative colitis.

- Recommended for use at time of diagnosis
- Identifies IBD patients as high or low risk of experiencing early and frequent relapses during the first 12 months
- **High-risk patients** can receive aggressive therapy earlier in their disease—which can block disease progression<sup>1,2</sup> and lead to sustained, steroid-free remission and fewer hospitalizations and CD-related surgeries<sup>3</sup>
- **Low-risk patients** can be managed with standard of care
- By taking advantage of this **Window of Opportunity**, you can gain tight control of your patients' IBD at time of diagnosis with the appropriate treatment

# PredictSURE IBD™

Adapted from Colombel et al.<sup>3</sup>

CDAI=Crohn's Disease Activity Index, for quantitation and tracking of disease activity in adults with Crohn's disease; CDEIS=Crohn's Disease Endoscopic Index of Severity, an index for determining the severity of Crohn's disease with endoscopic localization to ileum and colon; CRP=C-reactive protein, an established marker of disease activity in inflammatory bowel disease (IBD).

**BE SURE.  
BEFORE YOU BEGIN  
TREATMENT.**

Early, effective treatment during your patient's Window of Opportunity is crucial to successful outcomes.

PredictSURE IBD™ is a step toward the right treatment, for the right patient, at the right time—and personalized medicine for your Crohn's disease and ulcerative colitis patients.
